

HIGH VOLTAGE/HIGH POWER AIR/COMPOSITE CORE REACTORS

MHVXL -Series

MACR reactor are air cooled type with ultraviolet-proof insulation coatings core construction with have many advantages, such as low loss, high strength, low noise, being easy to mount and simple for maintenance. Their life expectancy is more than 30 years. In addition to the normal fixed inductance type of coil, we also manufactures Adjustable Reactor including multi-tapped adjustable ones and continuous adjustable ones. Generally, the variation in inductance of coil is 5% or extended. These are available for variety of applications like Shunt Reactor, Thyristor Controlled Shunt Reactor (TCR), Series Reactor, Series Reactor used in electric railway, Current-limiting Reactor, Filter Reactor, Smoothing Reactor, Test Lab Reactor, Damping Reactor, Splitting Reactor, Neutral-Grounding Current-limiting Reactor, Starting Reactor, Load-sharing Reactor, Lighting Coils, etc

Shunt Reactors & Thyristor controlled Reactors

Shunt reactors are parallel connected with the transformer tertiary winding in 220kV or 500kV Substation. They are used to compensate for the capacitive VAR reactance of the underground cable in transmission line of long distance and low load whereas Thyristor Controlled Shunt Reactors (TCR) are used in static VAR compensating device and can dynamically change the VAR compensating power and keep the voltage stability.

Series Reactors and damping reactor

Series reactors are series connected with VAR compensating shunt capacitor bank. They are used to restrain harmonic voltages, reduce distortion of system voltage and limit inrush current when capacitor circuit is putted into network for operation whereas damping reactor are associated with capacitors bank. They are specially used to limit surge currents when capacitor circuit are switched into A.C.circuit network for operation

Filter Reactors & filter reactor

Filter reactors are series connected with filter capacitor bank to form resonant circuit, which can filter specified harmonic currents whereas smoothing reactor are used to reduce the amplitude of harmonic current or voltage in D.C.system and restrain the speed o and peak value of short circuit current. They are used in HVDC transmission system and also series connected large rectification feed D.C. motor in steel and non-ferrous metallurgical plant.

Current-Limiting Reactors/ Splitting reactor & Load sharing reactor

Current-limiting reactors are series connected with power system (bus, line and load) they can reduce the short circuit current to allowable level for other equipment whereas these reactors are used to limit transient surge of current and are composed of two or multiple coil and are used in separating feed power systems which are isolated under any condition. Load sharing reactors are used for balancing current in parrellal circuits.

Neutral grounding current limiting reactor & Motor starting reactor

It is single coil reactor connected between neutral of H.V.shunt reactor or transformer and ground to limit the ground to line fault current level whereas motor starting reactor are meant for limiting starting inrush current.

Lightning reactor & Test lab reactor

Lightening reactors are used to arrest the effect of lightening for low capacity power station and generators stations. These are connected in series with power line at entrance of power station to reduce the lightening impulse voltage and its surge current whereas test lab reactor are installed in high voltage test lab and are kinds of reactor which are designed to satisfy the variable need of high voltage electric system.

MOTORON SEMICONDUCTORS CORPORATION

motorons@hotmail.com

HIGH VOLTAGE/HIGH POWER AIR/COMPOSITE CORE REACTORS

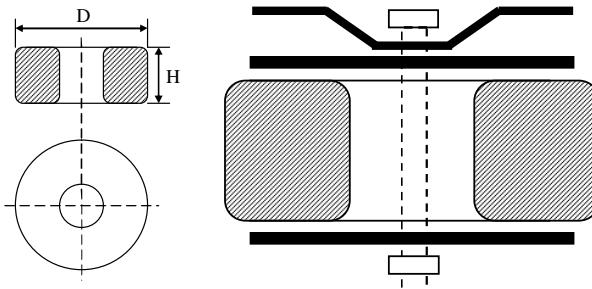

MHVXL-Series

Advantage:

- Energy efficient due to low no-load current.
- Reduce dv/dt and di/dt
- Better voltage regulation due to low inductance/resistance.
- Minimize flicker / voltage fluctuation/power oscillation
- Compact size/ unbalanced loads/ Low inrush current.
- High kilo Voltage fluctuation/ Low stress on switch gear
- Enhance capacity of distribution/transmission/transformer/motor
- Reduce stress on switchgear/semiconductor devices

General operating condition:

- Altitude is no more than 2000 meters;
- Ambient temperature:-5°C+40°C;
- Relative humidity≤50% at 40°C;≤90% at 20°C;
- No corrosive gas:conductive dust,inflammable and explosive medium surrounded.
- No violent vibration at the mounting position.

Electrical & Mechanical Specification(Current limiting reactor-Low/High frequent) Reactive Power < 1000,000 VAR
