VIBRATION MITIGATED WORKSTATION TABLES

Feed-back controlled

MVMWT-Series

Introduction:

MVMWT series of vibration mitigated workstations platforms are in various payload capacities (100-15,000 kgf) and differential vibration displacement level ranging from 100 nanometer. to 2.0 m.m. with varying vibration inertia. These uses feedback controlled eddy current/hysteresis and M.R. Bases dampers to tackle different compositions of vibration energy to ensure A vibration mitigated solution. These workstations finds applications in optics, micromaching, packaging reliability, yarn, petrochem, hoist, automobile, robotic, semiconductors industries, heavy electrical/mechanical engineering, solid state physical applications, seismic simulation, vibration control applications, structure reliability simulation, precious metal industries, avionics, railway automation/protection and many other research & development applications. Updated design topology ensures better vibration controllability with additional integrated control/protection. Company offers tailor made solution to custom requirement.

Operating Principle: These vibration mitigation devices workstation uses controlled eddy current dampers/hysteresis damper and m.r. dampers have different vibration energy absorption capability holding different stiffness. Normally hysteresis /eddy current damper mitigates in ultra low vibration energy with low vibration displacement and high velocity/frequency. Where as Magneto-rheological damper mitigates high vibration energy with larger vibration displacement and low velocity. This ability of variable damping makes to possible to mitigate spatial vibration to as much as 10 nanometer in two or three cycle. Care full selection/mounting of such dampers on workstation ensures a more or less critically damped surface with negligible or undetected spatial vibrational phase shift(on account of vibration interference). Such result are not possible with pneumatically/ hydraulically controlled surfaces where large compressors it self are the source of unmitigated vibration.

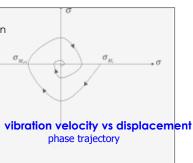

MVMW-000310L MVMW-002008H MVMW-010007L Specification of vibration mitigated workstation controllers: Low force/Low amplitude low force/high amplitude

					low lorce/light amplitude						
Model	Power watts	Force Kgf/10	Amplitude Micro. meter	Frequency k.hz	Coolin g	Model	power watts	Force Kgfx10	Amplitude Micro. meter	frequency k.hz	cooling
MVMW-000310L	300	0.60	5.0	10.0	Air	MVMW-000310H	300	17.1	10.0	7.0	Air

Feedback controlled vibration mitigated tables/workstation Operating voltage 220 volts/ (1 phase), 50 Hz, or 48/72/96 D.C.

Switching frequency 20.0 – 200,000Hz Force/displacement control accuracy 99.9% of set point afteradjustement Force/displacement control step down ratio 1:100 Force/displacement beats for unit responce;10.0 nano-meter/100 micro newton Response time 0.5-1.1 mill-seconds 0.0-12.0 volts D.C./4.0-20.0 mili amps Interface Signal Power factor/harmonics 0.95(lagg)/ less than 3% of first harmonics Control cascade feedback control with soft start Voltage/current/displacement - 31/2 red glow LED display Display Protection over voltage/short ckt & inline surge protection. Tailor made specification shaker controllers are also offered. High Frequency Electrodynamic Shaker Controllers Dimension: MVMWC-000310 08X06X06 MVMWC-012007 14X12X12 MVMWC-001210 10X06X06 MVMWC-015006 16X14X14 MVMWC-002008 12X08X08 MVMWC-020006 18X16X16 MVMWC-003008 12X10X10 MVMWC-030006 20X18X18 MVMWC-005007 12X10X10 MVMWC-075005 20X18X18

Three numerals after MVMWC indicate powerx100 of controller/shaker and last two-digit Indicates frequencyx1000. All dimensions are inches.
